W205 Project Proposal: 2016 U.S. Political Sentiments

Shuang Chan
David Skarbrevik

Setting up the Research Question

Main Topic: Political sentiments of US during 2016 presidential election

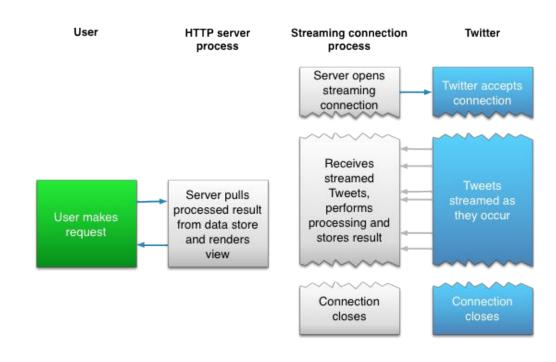

- Specific interests:
 - Average positive approval of democratic/republican candidates
 - Change in sentiments as a result of key events
 - News story
 - Debate
 - Polls
- Twitter API to measure sentiments of US population
 - Parsing tweets for keywords

Twitter API

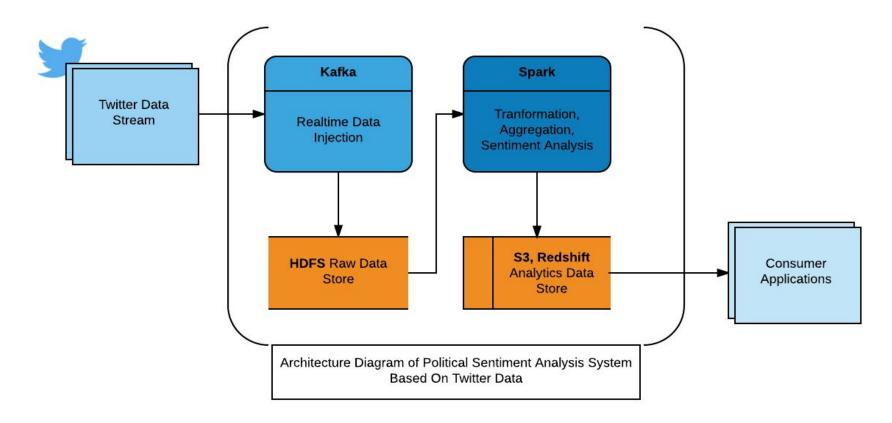

Types of data:

- Tweets
 - Text
 - URL/Media (if in tweet)
 - Time/Location
 - User ID
 - o # of re-tweet
- Users
 - # of followers
 - # of tweets

How we get the data:

Architectural Diagram

Design Considerations

- 1. Technical Challenges (volume and velocity)
 - a. Twitter API request rate limit
 - b. URLS/Media in tweets gives potential for variety of data

2. Organizational Challenges

Other Issues

1. Data Biases

2. How to tell the story based on the analysis
